Wall-chamber decomposition of $\Theta_{peg}$ (schematic)
Chambers $\mathcal{C}_1..\mathcal{C}_4$ separated by continuous walls $W_1, W_2$; discrete walls $W_3$–$W_6$ shown as external triggers.
Event star positions are indicative, not measured $(\rho, \delta)$ coordinates.
$W_1$: backing-ratio wall ($\rho = 1$)
$W_2$: oracle-deviation wall
